

Ismail TP

Security Analyst | Jr. Penetration Tester

Kozhikode, Kerala, India

+91 8113802658 | ismailtp.official@gmail.com | linkedin.com/in/ismail-tp | github.com/IsmailTP

Professional Summary

Penetration tester and security analyst with hands-on experience in Active Directory, web and API security, and vulnerability assessment. Skilled in reconnaissance, exploitation, and post-exploitation using industry tools and custom scripts. Builds practical lab environments and cybersecurity learning platforms to simulate real-world scenarios and strengthen skills. Focused on identifying risks, solving problems efficiently, and continuously improving in dynamic security environments.

Technical Skills

- | | | |
|----------------------------|--------------------------------|-------------------------------|
| • Penetration Testing | • Threat Detection | • Python |
| • Vulnerability Assessment | • Reconnaissance & Enumeration | • Password Attacks & Cracking |
| • Web Application Security | • API Security Testing | • TCP/IP Networking |
| • Network Security | • Network Penetration Testing | • Active Directory pentesting |

Tools

- | | | | |
|--------------|--------------|------------|----------------|
| • Nmap | • Metasploit | • Hashcat | • ffuf |
| • Burp Suite | • SQLMap | • Impacket | • Netcat |
| • Wireshark | • RustScan | • Postman | • CrackMapExec |

Professional Experience

R&D Member

Oct 2025 – Present

Offenso Hackers Academy

- Designed and deployed 5–10 hands-on penetration testing labs simulating real-world attack scenarios, ensuring stable infrastructure and seamless access for participants across cybersecurity events.
- Built and tested exploit environments covering web, network, and Active Directory attacks, enabling practical skill development and realistic adversary simulation.
- Developed backend validation logic and automation scripts to support lab environments, improving reliability and user experience.

Projects

The Void – Networking Learning Platform – ismailtp.github.io/the-void-networking-roadmap-v2/

- Built an interactive networking learning platform featuring structured roadmaps, simulations, and hands-on mini labs to simplify complex concepts.
- Designed guided modules covering TCP/IP, subnetting, routing, and traffic analysis with practical exercises for real-world understanding.
- Developed a clean, responsive interface with progress tracking and modular content to enhance learning efficiency and user engagement.

Into The Void – Prompt Injection Challenge (7 Levels)

- Designed and developed a 7-level prompt injection challenge simulating AI system exploitation through progressive attack scenarios.
- Implemented multi-stage attack paths including access control bypass, role manipulation, data extraction, and chained prompt exploitation.
- Created a narrative-driven environment (ECHO STATION) to simulate real-world adversarial AI behavior and decision-making systems.
- Built scoring logic based on time, attempts, and depth of exploration, with multiple endings to encourage advanced exploitation techniques.

Education

Bachelor of Business Administration (BBA)

2022 – 2025

Calicut University, Kerala

Certifications

- | | |
|---|----------|
| • Advanced Diploma in Information Security (ADIS) – Offenso Hackers Academy | Aug 2026 |
| • CompTIA PenTest+ – In Progress (Expected Sep 2026) | |
